The perinatal institute has earned Perinatal Care Certification from the Joint Commission. The certification program recognizes accredited hospitals committed to achieving integrated, coordinated and patient-centered care for mothers and their newborns.

Giving birth is a joyous occasion. But for many parents, it's also a time of questions. At Riverview Medical Center, we understand how important it is for parents to have their questions answered—every step of the way.

With a Level II NICU; around-the-clock availability of anesthesia; and 24-hour coverage by board certified obstetricians and pediatricians, neonatologists, maternal fetal specialists, lactation consultants, and Magnet award-winning nurses; we have the experts that can guide parents through their pregnancy.

The Perinatal Institute at Riverview Medical Center offers testing for all moms—high risk or not. New parents can find great peace of mind knowing the latest technology is available at the area's finest Childbirth Center.

If the pregnancy is high-risk, Riverview has the specialists, innovative technology, and diagnostics to answer your most important questions. Today, for moms older than 35, Amniocentesis is no longer the “only” option. Nuchal Translucency (NT Scan) now gives moms a non-invasive option in assessing their baby's risk for Down syndrome and other chromosomal abnormalities.

Comprehensive High-Risk Maternal Fetal Services:

- High-risk inpatient and outpatient pregnancy consultation
- 1st and 2nd trimester genetic screening
- Amniocentesis
- Chorionic Villus Sampling (CVS)
- Doppler Flow mapping studies
- Genetic counseling
- High definition ultrasound
- Nuchal Translucency screening
- Percutaneous Umbilical Blood Sampling (PUBS)
- Prenatal care
- Prenatal consultation
- Prenatal diagnosis
- Targeted ultrasound
